

Prompt for channel Name

We are creating a YouTube channel about personal finance, investing, passive income, and money psychology explained through simple animated videos similar to channels like Nick Invests. The goal is to create a memorable and trustworthy YouTube channel name that sounds professional, simple, and easy to remember.

You are an expert brand strategist who specializes in naming YouTube channels and digital brands in the finance and education niche.

Generate 30 YouTube channel name ideas for this channel.

Follow these rules:

- Names must be short and easy to remember
- Prefer 2 to 3 word names
- Sound trustworthy and educational
- Similar branding style to names like Nick Invests
- Avoid complicated spelling
- Include a mix of personal brand style names and authority style finance brand names

Present the results in three sections:

Personal brand style names
10 ideas in a numbered list

Finance authority style names
10 ideas in a numbered list

Minimal modern finance brand names
10 ideas in a numbered list

The target audience is 18 to 40 year old viewers who want simple explanations about money, investing, passive income, and wealth building.

Channel Logo

We are creating a YouTube channel about personal finance, investing, passive income, and money psychology explained through simple animated explainer videos similar to channels like Nick Invests. The channel uses simple cartoon style characters to explain financial concepts. The logo should only contain a character and no text.

You are a professional brand identity designer and AI image prompt specialist experienced in creating character based logos for educational YouTube channels.

Your task is to write detailed AI image generation prompts that can be used in tools like Midjourney, DALL E, Leonardo AI, or similar generators.

Generate 5 AI image prompts for a YouTube logo character.

Follow these design rules

- The logo must contain only a character and no text
- Character should represent finance, investing, or money education
- Style should be simple cartoon or flat illustration similar to animated finance explainer channels
- Character should look friendly, smart, and trustworthy
- Minimal design so it works well as a YouTube profile picture
- Clean shapes and simple colors
- Finance themed colors such as green, blue, white, or dark background with bright highlights

Each prompt should clearly describe

- the character appearance
- clothing or finance related elements
- color palette
- illustration style
- background style

Present the results as 5 numbered prompts that can be copied directly into an AI image generator.

The target audience is 18 to 40 year old viewers who want simple explanations about money, investing, passive income, and wealth building.

Video ideas

We are building a YouTube channel that explains personal finance, money psychology, investing basics, passive income, and financial traps using simple animated explainer videos similar to channels like Nick Invests. The goal is to find highly clickable and viral video topics that attract curiosity and explain complex money ideas in a simple way.

You are a YouTube growth strategist and finance content researcher who specializes in identifying high CTR video topics in the personal finance and money psychology niche.

Generate 50 viral YouTube video topic ideas.

Follow these rules

- Topics must focus on money psychology, personal finance, investing, financial traps, wealth building, and passive income
- Titles should trigger curiosity or challenge common beliefs about money
- Topics should be similar in style to channels like Nick Invests
- Avoid generic topics like "How to Save Money"
- Focus on psychological insights, hidden financial traps, and surprising money truths
- Topics should feel educational but highly clickable

Create topics using patterns like

- Why Everything Changes After \$X
- The X Trap That Keeps People Poor
- The Hidden Cost of X
- Why Most People Stay Broke
- What Happens When You Reach \$X
- The Financial Mistake Almost Everyone Makes

Present the results in 5 sections

Money psychology topics
10 ideas in a numbered list

Personal finance topics
10 ideas in a numbered list

Financial trap topics
10 ideas in a numbered list

Investing and wealth building topics
10 ideas in a numbered list

Passive income and financial milestones topics
10 ideas in a numbered list

The target audience is 18 to 40 year old viewers who want simple explanations about money, investing, passive income, and wealth building.

Video Script

We are creating a YouTube channel that explains personal finance, money psychology, wealth building, and investing through simple animated explainer videos similar to channels like Nick Invests. The videos use storytelling, psychological insights, simple examples, and relatable life situations to explain financial concepts in a way that feels engaging and easy to understand.

You are an expert YouTube scriptwriter who specializes in writing high retention educational videos in the finance and money psychology niche. Your scripts combine storytelling, curiosity, simple explanations, and psychological insights to keep viewers watching.

Write a complete YouTube video script based on the topic:
[INSERT VIDEO TOPIC HERE]

Follow these script rules:

- Write in a storytelling and conversational style similar to animated finance explainer channels
- Start with a strong psychological hook that makes viewers curious
- Use relatable real life situations about money and everyday financial decisions
- Explain financial concepts in a very simple way
- Include psychological insights about how people think about money
- Use examples, metaphors, and simple comparisons to make ideas easy to understand
- Gradually build curiosity and reveal the key idea step by step
- Avoid complicated financial jargon
- Keep the tone educational, engaging, and easy to follow

Script structure:

Hook

Start with a relatable situation or surprising idea that grabs attention

Problem setup

Explain the common belief or mistake people make about money

Core explanation

Break down the financial concept step by step using simple examples and psychology

Insight section

Reveal the deeper idea about how money, behavior, or wealth building actually works

Practical takeaway

Explain what viewers should understand or do differently

Ending

Close with a thought provoking conclusion that reinforces the key lesson

Additional instructions:

- Script length should be around 1800 to 2200 words
- Write the script in a natural voiceover friendly style
- Do not include scene directions or camera instructions
- Do not copy any existing scripts but keep the same storytelling style and pacing

The target audience is 18 to 40 year old viewers who want simple explanations about money, investing, passive income, and wealth building.

Prompt for Images

We are producing animated YouTube videos about personal finance, money psychology, and investing similar to channels like Nick Invests. The visuals are simple cartoon style finance illustrations with a consistent character and minimal background elements.

You are an expert storyboard designer and AI image prompt engineer. Your task is NOT to generate images. Your task is to generate detailed AI image prompts that can later be used in image generators like Midjourney, Leonardo AI, DALL E, or Stable Diffusion.

I will provide a full video script. Your job is to break the script into visual scenes and write image generation prompts.

Follow these rules:

- Do NOT generate images
- Only generate image prompts that will later be used in AI image generators
- Create 1 image prompt for every 2 sentences of the script
- Each prompt should clearly describe the scene that represents the script visually
- Use a consistent cartoon character across scenes
- The character should be a simple round faced cartoon man similar to animated finance

explainer videos

- Use minimal flat vector illustration style
- Thick black outlines
- Clean white or light background
- Simple color palette like green, blue, grey, white
- Include finance related objects such as piggy bank, coins, wallet, bank vault, charts, house, money stacks, laptop, or investment symbols when relevant
- Scenes should be simple and easy to animate

Style requirements for every prompt:

- simple 2D cartoon finance explainer illustration
- flat vector style
- minimal shading
- bold outlines
- clean background
- consistent character design across all scenes

Output format:

Scene 1

Short description of what is happening in the scene

Image prompt

Scene 2

Short description of the scene

Image prompt

Continue this pattern for the entire script.

Now analyze the following script and generate AI image prompts.

[PASTE VIDEO SCRIPT HERE]

Thumbnail

We are creating YouTube thumbnails for animated personal finance videos similar to channels like Nick Invests. The thumbnails use simple cartoon characters, bold text, and minimal elements that clearly communicate the idea of the video. The goal is to create highly clickable thumbnails that are easy to understand even on small mobile screens.

You are an expert YouTube thumbnail strategist and AI image prompt engineer. Your job is NOT to generate images. Your job is to generate detailed AI image prompts that can later be used in image generators like Midjourney, Leonardo AI, DALL E, or Stable Diffusion.

I will provide a video topic. Your task is to create a thumbnail concept and an AI image prompt for generating the thumbnail illustration.

Follow these rules:

- Do NOT generate the image
- Only generate an image prompt for an AI image generator
- The thumbnail should be very simple and easy to understand
- Use a cartoon character similar to animated finance explainer videos
- Flat 2D vector illustration style
- Bold black outlines
- Minimal background
- Use finance related objects like money stacks, piggy bank, coins, arrows, charts, vault, house, or cash
- The character should have exaggerated expressions like surprise, thinking, pointing, or excitement
- Composition should be clean with only 1 or 2 main visual elements
- Leave space on the thumbnail for big bold text

Output format:

Thumbnail Idea

Short explanation of the visual concept

Thumbnail Text Suggestion

3 to 5 short words that could be placed on the thumbnail

AI Image Prompt

A detailed prompt that can be used in an AI image generator to create the thumbnail illustration

Now create the thumbnail prompt for this video topic:

[PASTE VIDEO TOPIC HERE]

Prompt for SEO

We are creating SEO optimized YouTube metadata for animated personal finance videos similar to channels like Nick Invests. The videos explain money psychology, investing, passive income, and financial traps using simple storytelling and animated visuals. The goal is to maximize discoverability, click through rate, and search ranking on YouTube.

You are a YouTube SEO strategist who specializes in optimizing educational finance videos for high ranking and viral growth.

I will provide a video topic or a full video script. Your task is to generate complete YouTube SEO elements.

Follow these rules:

- Titles must be highly clickable and curiosity driven
- Titles should feel similar to successful finance explainer channels
- Use psychological triggers like curiosity, surprising facts, or financial milestones
- Avoid generic titles
- Description should be SEO optimized but easy to read
- Include important keywords naturally
- Tags should include high search keywords related to personal finance, money psychology, investing, and wealth building

Generate the following:

YouTube Titles

Generate 5 highly clickable title options

Video Description

Write an SEO optimized YouTube description (2 to 3 paragraphs)

YouTube Tags

Generate 20 to 30 SEO optimized tags

Keywords

Generate 15 high search keywords related to the topic

Hashtags

Generate 5 to 8 YouTube hashtags

Now generate the SEO for this video topic or script:

[PASTE VIDEO TOPIC OR SCRIPT HERE]

The Small Upgrade Trap That Slowly Makes You Poor

YouTube Video Script | Personal Finance / Money Psychology

Let me ask you something.

When was the last time you upgraded something in your life — your phone, your car, your apartment — and told yourself it was totally worth it because it was only a little bit more than what you had before?

Maybe you went from a \$900 phone to a \$1,100 one. Or from a \$1,200 apartment to a \$1,500 one. Or you swapped your regular coffee for a subscription box that costs "just a few dollars more a month."

Each time, the upgrade felt reasonable. Logical, even. You worked hard. You deserved a small step up.

But here's the thing nobody tells you — those small steps up have a name. And that name is lifestyle creep. And if you're not paying attention, it will quietly drain more wealth from your life than almost any other financial mistake you can make.

Not because of one big decision. But because of a thousand small ones that all felt completely fine in the moment.

Here's the story most people live.

You're 23, fresh out of college, first real job. You're making \$40,000 a year. You're living in a small apartment, cooking at home, driving an old car, and honestly — life feels pretty good. You're managing.

Then you get a raise. Maybe you're at \$52,000 now. And something shifts.

You think: *I can afford a nicer place*. So you upgrade the apartment. Then you think: *My car is embarrassing for someone at my level*. So you upgrade the car. Then comes the gym membership, the streaming services, the weekly dinners out, the wardrobe refresh because, well, you're a professional now.

And two years later, you're making significantly more money than when you started — and somehow you feel just as financially tight. Maybe even tighter.

Sound familiar?

This isn't a rare story. This is the default story. Most people, as their income rises, watch their expenses rise right alongside it — sometimes faster. And they never stop to ask why. Because every single upgrade along the way felt small, justified, and reasonable.

That's the trap. Not one big financial mistake. A hundred small upgrades that silently eat your future.

Let's talk about why this happens, because it's not just about discipline or willpower. It's deeply psychological.

There's a concept called **hedonic adaptation**. It basically means this: humans are wired to get used to things. Fast.

You get a new phone and for a week, it feels incredible. Then it becomes normal. Then it becomes the baseline. And soon enough, the phone you once dreamed about is just... your phone. The excitement fades, but the expense stays.

The same thing happens with apartments, cars, clothing, food — everything. You upgrade, you feel good briefly, it becomes the new normal, and then you need the next upgrade to feel that same satisfaction again.

It's like a treadmill. You keep walking, but you never actually move forward.

Now layer on top of that something called **social comparison**. We are deeply wired to measure ourselves against the people around us. And as your income grows, the people around you change. Your colleagues have nicer things. Your friends are going on better vacations. And suddenly, what used to feel like a luxury now feels like just keeping up.

You're not buying a nicer car because you necessarily need it. You're buying it because everyone at your level seems to have one, and not having it starts to feel like falling behind.

And here's the sneaky part — none of this feels irrational while it's happening. It feels completely normal. Because it is normal. But normal and financially healthy are not the same thing.

Let me show you what this actually costs with a simple example.

Say you get a \$500-a-month raise. That's \$6,000 more per year. Feels great.

But with that raise, you upgrade your apartment by \$300 more per month. You start eating out more, spending an extra \$100 per month. A new car payment adds another \$150. Small stuff here and there — a streaming service, better gym — adds maybe \$50 more.

That's \$600 per month in new expenses. Which is more than the raise you just got.

You actually went backwards. And you feel like you got ahead.

Now imagine that pattern repeating every time you get a raise over a 10-year career. You've potentially earned hundreds of thousands of dollars more than when you started — and saved almost none of it. Because every dollar that came in was matched, or beaten, by a dollar going out.

Meanwhile, someone who kept their expenses roughly the same, or increased them slowly and intentionally, took that extra \$500 a month and invested it. Over 10 years, at a reasonable market return, they might have turned that into well over \$80,000 or \$90,000 in wealth — just from that one raise alone.

Same income. Completely different financial life. The difference wasn't talent, luck, or a secret strategy. It was the trap.

Here's where it gets interesting — and a little uncomfortable.

Most people think the path to wealth is earning more. And yes, income matters. But income without control over lifestyle creep is like pouring water into a bucket full of holes. It doesn't matter how fast you pour. The bucket stays empty.

The people who actually build real wealth — not the people who look wealthy, but the people who are wealthy — they tend to do one thing differently. They create a gap. A permanent gap between what they earn and what they spend.

And they protect that gap like it's sacred.

They don't inflate their lifestyle with every raise. They might enjoy some of it — a nicer dinner here, a better vacation there — but they make a deliberate decision about how much of their income increase gets to become a lifestyle increase, and how much gets redirected to building wealth.

There's actually a term for this — it's called **paying yourself first**. Before the money has a chance to quietly disappear into upgrades and conveniences, you automatically route a portion of every raise, every bonus, every income increase into savings or investments.

You set the rule before you can talk yourself out of it.

Because here's the truth: you will always find reasons to spend more money. Life will always present you with a reasonable-sounding upgrade. There will always be a newer phone, a nicer neighborhood, a better version of the thing you already have. That pressure never stops.

The question is whether you have a system that protects your future self from your present self.

There's another layer to this that almost nobody talks about. The small upgrade trap doesn't just cost you money — it costs you **options**.

Every time your lifestyle expands to match your income, you become more financially fragile. You can't take a pay cut to follow a passion. You can't leave a bad job quickly because you need that paycheck to maintain the life you've built. You can't weather a financial emergency without real stress.

The upgrades feel like rewards for success. But over time, they quietly become a cage.

So what do you actually do with this?

First — get honest about your baseline. Go look at what you were spending three years ago versus what you spend today. Has your lifestyle grown faster than your savings? If yes, you've already been in this trap. And that's okay. Most people are. But now you know.

Second — create what's called a **raise rule**. It's simple: every time your income goes up, you decide in advance what percentage of that increase goes to lifestyle and what percentage goes to wealth building. A common approach is something like 50-50. Half the raise improves your life today. Half gets invested for your future life. You enjoy the win, but you also capture it.

Third — audit your upgrades. Not to punish yourself, but to get clear. Look at the recurring expenses that have crept in over the last few years. Subscriptions, memberships, habits. Ask yourself honestly: does this bring me real ongoing value, or did I upgrade to it and forget about it? Some things will be worth keeping. Others, you'll realize you barely notice — and cutting them back costs you nothing in happiness but gains you real money every month.

And fourth — think about what you're actually buying when you choose the upgrade. You're not just buying a nicer apartment or a newer phone. You're buying a higher financial floor that you now have to maintain every single month, for years. And the longer you maintain it, the more normal it feels, and the harder it becomes to pull back. That's the real price.

Here's the thought I want to leave you with.

There's a version of your life where you earn more every year, enjoy a decent lifestyle, and still somehow end up with very little to show for it. And there's a version where you earn the same amount, make a few intentional choices about what you keep and what you let go of, and end up genuinely wealthy.

The difference between those two lives isn't dramatic. It doesn't require sacrifice or deprivation. It just requires seeing the trap for what it is.

The small upgrade trap doesn't feel dangerous because it's made of reasonable decisions. It's made of things you genuinely can afford. It's made of normal behavior. That's exactly what makes it so effective at keeping people financially stuck.

You don't need to stop enjoying your money. You just need to stop letting your expenses automatically grow to consume all of it.

Protect the gap. Pay yourself first. And before you take the next small step up — pause for just a second and ask: is this a reward, or is this a trap dressed up as one?

That pause might be worth more than any raise you'll ever get.
